

NORGANIX

Advantages for the Applicator

Top Ten Advantages to the Applicator	NORGANIX	Typical Sealants
Primary application needed only one time in the life of the concrete; secondary application in 5 years	✓	
Beneficial to concrete of any age, at any point in its useful life span, whether traffic bearing or not	✓	
Can be applied immediately after concrete pour or after cure; can be used as an alternative curing agent	✓	
Does not leave a surface sheen; leaves concrete surface open to promote superior bonding ability	✓	
Paintability is excellent; also functions well as a primer application for surface treatments	✓	
Greatly minimizes the damage to topical sealants and acrylic coatings caused by internal vapors	✓	
Reduces labor cost for installation of new concrete and greatly reduces costs to maintain existing concrete	✓	
Penetrates fast into concrete, even against pre-existing hydrostatic pressure; dries fast, does not evaporate	✓	
Generates no heat nor expansion pressures during liquid to solids conversion	✓	
Easy to apply and is completely safe to installer; helps user meet stringent FDA and OSHA health requirements	✓	

What lives in your concrete?
